and middle school students**

1 teacher : 1 student coaching

Offline - Online blended learning

**Self-directed learning &
strengthening of Self-confidence**

**Your child will build
the foundation of critical thinking,
having a playful summertime!**

WHAT EYE LEVEL IS

Eye Level is a global educational enrichment program for students 3-16 years of age, with 2.5 million members in 22 countries.

Through individualized learning, it builds the foundation of critical thinking and develops the ability of self-directed learning.

EYE LEVEL PLAY MATH (3-5 years old) is a collection of patented learning materials designed to introduce mathematical concepts to pre-school children. The learning program includes three-dimensional early childhood mathematics textbooks which foster creativity through math stories and build manual dexterity through a variety of hand activities. In so doing, Eye Level Play Math provides a strong foundation for school mathematics.

EYE LEVEL CHINESE JUNIOR (5-12 years old) is a systematic Chinese learning program designed to let students study the four skills of language learning: listening, speaking, reading, and writing. Learn the standard Chinese pronunciation by analyzing oral structures, and making use of the Beijing standard vocabulary under the supervision of Beijing University professors.

EYE LEVEL HAPPY TALK (5 years old and above) is a situational English program that keeps students entertained with various visual and activities. Instructor feedback provided both online and offline allows students to achieve balance among the four key English skills.

EYE LEVEL MATH (5-16 years old) takes the student through a progression of 32 levels of study, beginning with foundational skills (Basic Thinking lessons) and culminating with advanced concepts and applications (Critical Thinking Lessons). By completion of Eye Level Math, the student will have mastered basic arithmetic operations and mathematical thinking, while developing greater concentration, better study habits and increased self-confidence.

Recognised by the **National Council of Teachers in Mathematics (NCTM)** and the **National Council of Teachers of English (NCTE), USA.**
